Add Value & Style to Your Kitchen

LED FEATURES & BENEFITS

50,000 Hour Lifespan – 30-year life at 4 hours of daily use

Convenient – Never need to change bulbs

Very Low Energy Consumption – Lights pay for themselves

Extremely Low Heat – Lights and countertops stay cool

LED Lighting for Your Kitchen

You have a designer creating your kitchen, why not let them design your cabinet lighting as well? Cabinet lighting can make or break a quality kitchen. With Sensio Lighting, you can easily add high quality LED lighting to every area of your kitchen cabinets. Choose between high definition puck lights and low profile flexible strips, all dimmable with standard dimmer switches using the innovative DayBreak driver. Plus, you can control your new lights with infrared sensors or even Wi-Fi receivers controlled by battery-operated wall switches or a smartphone app. Available in warm or cool color temperatures, these efficient LED lights are built to last as long as your kitchen and come with a lifetime warranty.

- 1 Under-Cabinet Lighting** is primarily used as task lighting, perfectly positioned to ensure the kitchen is an efficient working space for everyday tasks such as food preparation. Puck lighting is typically placed under the wall units to illuminate the worktop, giving light exactly where it is needed. Or, create a continuous run of lighting by using LED strips. Flexible strips can be interlinked or cut to length to create the perfect solution.
- 2 Over-Cabinet Lighting** is a great way to brighten the kitchen with accent light. Run strip lighting along to top of the wall units to up-light the ceiling and add depth. Over cabinet lighting adds a great effect and offers perfect mood lighting at night.
- 3 Integrate LED Toe Kick Lighting** into your kitchen design to add dimension to the room. Toe kick lighting is soft and unobtrusive, used for decorative purposes. Often an overlooked aspect of kitchen lighting, it really can make a big difference.
- 4 A stunning added extra to your kitchen, LED In-Cabinet Lighting** can have a big impact. Illuminate cabinets with glass doors or create lighting inside any cabinet automatically as doors open for ultimate ease of use. A beautiful added effect that brings a level of luxury to any kitchen design.
